

## ProSuite

# DfE Measures Module

The DfE Measures module is a new product from Advanced which allows FE providers to monitor their performance against the Department for Education (DfE) 16 to 18 accountability measures.

This module is a new standalone solution from ProSuite, using an updated user interface and cloud-based architecture for a much improved user experience.

### DfE Insight at a Glance

All Further Education providers with eligible provision aimed at 16- to 18-year-olds are held accountable for their performance against certain DfE measures. Results for each provider are published on the DfE School and College Performance Data website and used to inform Ofsted inspections. It is therefore vital for FE providers to understand how their performance holds up against these measures, making sure that any issues are identified and addressed in good time.

The DfE performance measures are complex to calculate and difficult to replicate internally. However, with this new module, it is possible to generate intuitive, flexible reports based on the measures, providing an immediate snapshot of your performance.

### Flexible Reporting

The DfE measures module produces reports based on the following headline measures: Attainment, English & Maths Progress, Progress (16 to 18 Value-Added) and Retention. Celebrate your successes, and identify areas for improvement, by analysing your data against each of these measures. Each report can then be analysed against course codes, departments, curriculum areas, student characteristics and more for powerful performance insight.

### Completely cloud-based

Our DfE Measures solution is the latest in the range of cloud-based solutions from Advanced. You and your team can access the module as a one-stop shop for performance data from anywhere with an internet connection, while your software is securely hosted by us.

With increased accessibility and data security, this cloud-based module provides in-depth monitoring information for whoever needs it, whenever they need it.

## Additional benefits

### In-depth intelligence

Generate historical snapshots, allowing you to view and compare performance measures at specific points in time.

Get a long-term view of your progression to identify any performance trends at a glance.

### Connected data

Data can be exported to Microsoft Excel to enable integration with existing documents, reports, and dashboards.

Rather than being hidden away in the system, your data will be easily shareable, making sure that it can reach the right people and influence future planning.

### Plan ahead

Reports can be based on both predicted and actual grades, allowing you to identify areas for improvement within the year with sufficient time to intervene.

Stay in control of your progression data and plan ahead to ensure growth and achievement throughout the year.

### Modern design

This product has been built from the ground up with a new user interface and user experience. These improvements will be used as part of our design ethos moving forwards.

With a much more intuitive design, all staff members using the DfE measures module will be able to make the most of the system from day one.
